Abstract:

The current library is characterized by the use of Information and Communication Technologies (ICTs) in performing various tasks. The advent of these technologies in libraries have changed virtually all roles of librarians while at the same time posing some challenges including the need for updating new knowledge and skills, re-assessing the strategic plans, changing new working titles, adding new responsibilities and installation relevant ICT Infrastructure. The sustainability of ICT based services is raising a lot of questions in the environment like Tanzania leaving the future of the current libraries vague. The paper concludes by stressing on training of library staff both subordinate and top leaders, it recommends on mobilizing funds for ICT based projects from local supports. It also recommend an integration of technology based library plans into the overall strategic plans of the institution, the paper recommend establishment of consortia such that of system administrators working to support library ICTs infrastructure and Last but
